A table, built in three steps

All numbers below are invented teaching data for a typesetting lesson.

1. Understand rows and columns

The first column is left aligned; the second is right aligned.

Task	Time (min)
Draft	9.50
Review	12.25

2. Separate the heading and align decimals

The S column parses numbers. Braces protect its text heading.

Task	Time (min)
Draft	9.50
Review	12.25

3. Add a description without overflowing

The description receives the remaining width and wraps. Table 1 keeps the descriptions readable.

Table 1: Invented tasks and times

Task	Description	Time (min)
Draft	Write a short introduction that states the question before explaining the background.	9.50
Review	Check that captions name units, references resolve, and the table fits its container.	12.25

Change one description and recompile to see the X column reflow.
